

Mega - Green Sleeve™

50% More Content

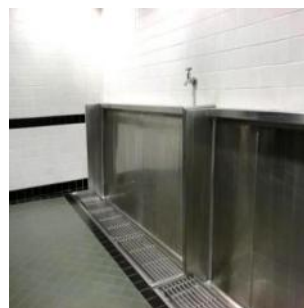

Now, our Green Sleeve comes with 50% more content.

The Green Sleeve is eco friendly unlike most sleeves in the market.

This is the only sleeve capable to digest uric salt and comes with a copper inhibitor to prevent deterioration of pipe work.

Key benefits

- Can cut water usage by up to 96%
- Retro fits new and existing urinals.
- Significantly reduces both water and maintenance costs
- Reduces blockages
- Prevents odors
- Improves hygiene
- Improves appearance
- Eliminates the need for harmful cleaning chemicals
- Keeps urinals looking good and smelling fresh
- Reduces the environmental impact

Green Sleeve™ - dealing with the source of the problem, not just covering it up!

Why choose the Bio Blitz™ Green Sleeve?

The Green Sleeve effectively solves the main problems that are commonly found in urinals and washrooms. The system finds the source of the problem and starts to treat it instantly. The Green sleeve eliminates the problem, rather than mask or cover it up. The Green sleeve contains a friendly bacteria that multiply and produce enzymes to penetrate and attack the uric acid, salts and sludge and scale to prevent build up.

The Green Sleeve is a retro fit design that can be installed into new and existing urinals and it will reduce dramatically the water usage and maintenance cost.

With the installation of the system you are showing your commitment to save our precious water and protect the environment by reducing water usage and the eliminating the need for harsh chemical cleaners.

Water savings of up to 98% of overall usage

With the installation of the BNS water management system, the amount of water used in a urinal can be reduced up to 98%. This is a significant saving on water costs and usage.

Help to prevent blockages

The clever design of the sleeve cap prevents foreign matter such as cigarette butts, hair, chewing gum and other foreign matter from falling down the waste outlet.

Keep washrooms smelling fresh

The Green Sleeve has been designed to prevent and lock odour from the urinal maintaining washrooms fresh.

Cleaning and Maintenance

The use of the Green Sleeve eliminates the need for harsh chemical cleaners. Do not clean the urinals with Chemicals as this reduces the effectiveness of Bacteria in the sleeve. BNS has developed a multipurpose cleaner, Biological Cleaner, to clean the urinals when using the Green Sleeves. Its daily use will boost the performance of the sleeve and keeping the urinal and washroom hygienic and clean.

Environmental benefits using the Bio Blitz™ Green Sleeve

Besides the main benefit of saving large amounts of water, the Green Sleeve also removes the need to use harsh chemical cleaners like bleach and acid. The Green Sleeve also removes the need for deodorizers and sanitizers.

The sleeve can be recycled once the bacteria have been used and the biological bacteria used in the block and cleaner are fully biodegradable. By using less water, you are also using less energy (supply and treatment) which in effect reduces your carbon foot print.

How does the Green Sleeve™ work?

When the urinal is flushed, the block slowly dissolves, releasing friendly bacteria which sources the uric salt and sludge build up - the main cause of the odour and blockages.

Once the bacteria are released from the block, they start to multiply in the urine-rich environment and produce the Important enzymes which feed on the uric salts. These enzymes change the structure of the uric salts and sludge, making them soft. When you next flush or clean the urinal these despoths are be removed. After each clean, more bacteria from the sleeve starts this process again keeping the urinal and plumbing odour and blockage free.

The Green Sleeve has been designed with a copper inhibitor to help protect the plumbing and pipework from corrosion and deterioration.

Why is the Green Sleeve™ different to other urinal sleeves?

The Green Sleeve is Eco-Friendly unlike most sleeves in the market. This is a Biodegradable product that does not cause any environmental damage.

Additionally, the Green Sleeve eliminates the source of the problem instead of masking it as its competitors. Some other products are made with enzymes, the problems is that enzymes do not produce enzymes whereas bacteria produce more bacteria and enzymes to break down urine and uric salt.
